

FHIR Jumpstart Program

Support Interoperability and Patient Access for Healthcare services

Interoperability and Patient Access final rule has made it mandatory for Payers (Health Insurance organizations) to put patients first by giving them access to their health information in a way, they can best use it, when they need it most. This rule is focused on patient data using CMS (Center for Medicare & Medicaid Services) to regulate Medicare Advantage (MA), Medicaid, CHIP, and Qualified Health Plan (QHP) issuers on the Federally facilitated Exchanges (FfEs). CMS-regulated payers must facilitate enhanced data sharing by exchanging data with other payers at the patient's request.

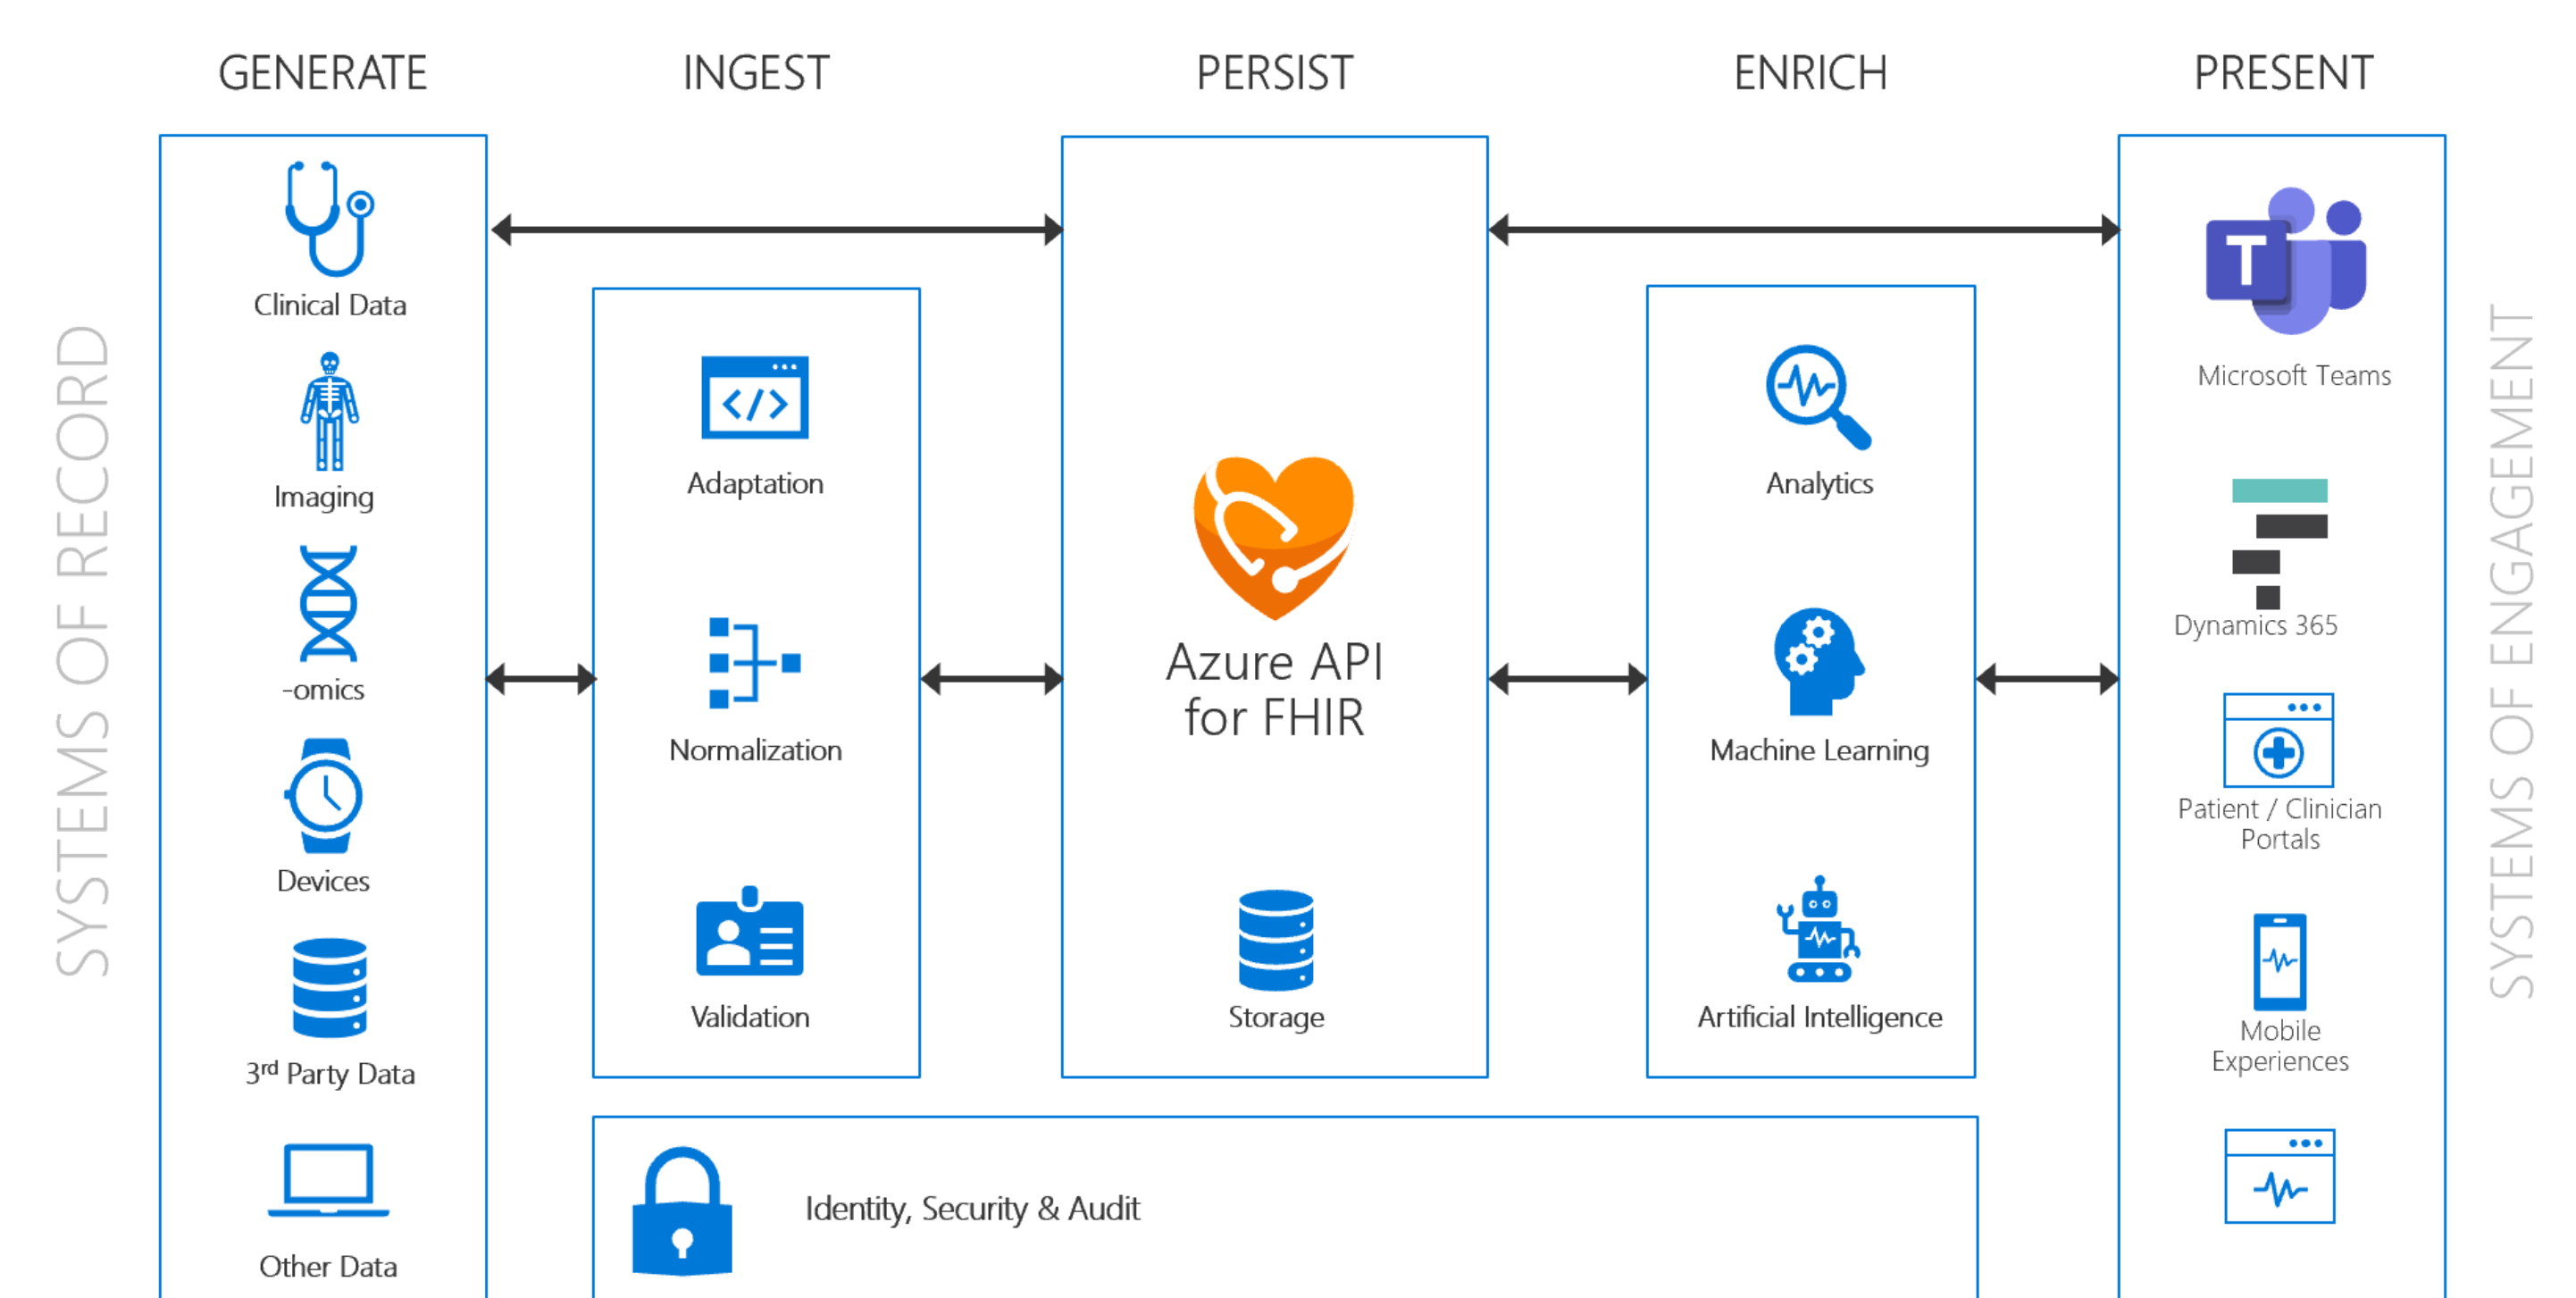

Hanu's FHIR Jumpstart program provides the necessary infrastructure, enablement, and knowledge transfer to enable a multitude of future use-cases and adhering to regulatory compliance for data exchange, SMART App Development, and Advanced Analytics.

Jumpstart Program

Helps to publish selected APIs for third party developers, Payer to Payer Data Exchange, and Participate in trusted exchange networks.

Phase 1 - Assessment

- Data source assessment for FHIR resources
- Identifying schema changes required for compliance with FHIR
- Identify security and privacy requirements
- Design and roadmap for interoperability adaptation

Phase 2 - Implementation

- Transform and ingest data into Azure FHIR data store
- MS Azure FHIR Provisioning
- Continuous data integration with Azure FHIR data store
- Securing the FHIR APIs through SMART
- Testing
- User Acceptance Testing (UAT)

Phase 3 - Manage or Transfer
